

Sustainable transport

Katarina Maaskant
IKEA EU Affairs

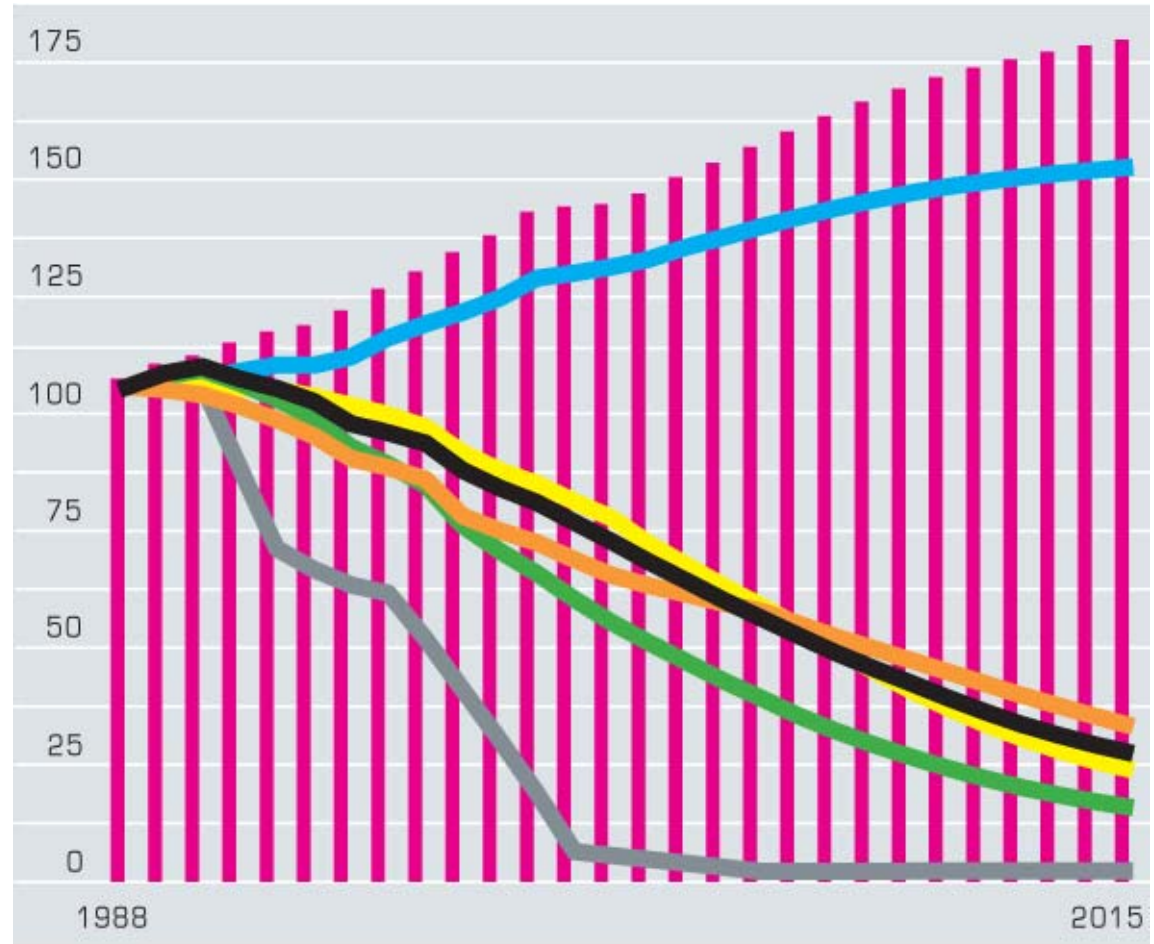

IKEA Sustainable transport

- Reduction target for CO₂
- Efficient handling materials
- Regional versus global production
- IKEA minimum demands for environmental performance of road carrier
- Tool to evaluate and compare performance above minimum demands
- Supporting EU Climate TransAct/US SmartWay

Why supporting EMS?

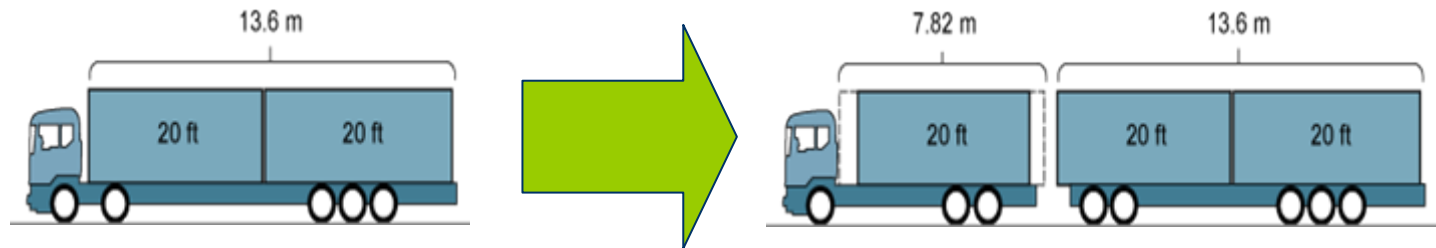

Urgent need to decouple CO2 emissions from growth in transport!

Trafikarbejde SO2 HC CO NOx Partikler CO2

Why supporting EMS?

- **IKEA transportation of tea lights**
 - Annual sales of 15 million packages

Using longer vehicles: From 1 260 to 800 trucks

Total savings of 460 trucks & reduction of CO2 emissions with 20%

Why supporting EMS?

Transport of:

- IKEA products taking a lot of space (mattresses)
- AND others which are very heavy (solid wood/ceramics)
- All modes of transports needs to increase efficiency and reduce environmental impact
- No more 'low hanging fruits' – not for companies and not for policy makers

Home is the most important place in the world
